***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance: the prior art of record does not anticipate or render obvious a method of making a trench DMOS transistor having overvoltage protection substantially as claimed. For example, the Williams et al. patent, which was relied upon in the previous Office action mailed on 25 August 2004, discloses a method of making a trench DMOS transistor. The method comprises: forming a body region on a substrate of a first conductivity type by an implantation of a second conductivity type, and forming at least one trench extending through the body region. While Williams et al. discloses a step of forming at least one trench extending through the body region, the prior art of record fails to anticipate, teach or suggest - either separately or combined, the limitation of forming at least one trench extending through the body region, wherein the body region is formed prior to the step of forming at least one trench.

In addition, the amendment filed on 26 November 2004 has overcome the rejection of claims 13-25 under 35 USC §112, first paragraph as set forth in the previous action mailed on 25 August 2004. Accordingly, the rejection has been withdrawn. Since there are no outstanding issues in this application, the application is now in condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should

preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
